Engineering Problem Solving with C++, 3e Chapter 2 Test Bank

1. Match each of the following data types with literal constants of that data type. A data type can be used more than once.

   A. integer
   B. double
   C. character
   D. string
   E. boolean
   F. none of the above.

   ____B____ 1.427E3
   ____D____ "Oct"
   ____B____ -63.29
   ____F____ #Hashtag
   ____C____ '+'
   ____A____ -85
   ____E____ true
   ____C____ '\''

2. For each of the following determine if it is a valid identifier, and if it is not state why.

   A. House# not valid, # is not allowed in identifier
   B. 2nd not valid, identifiers must start with letter or underscore not a number
   C. WHILE valid
   D. num4 valid
   E. double not valid, double is a keyword
   F. last_name valid

3. Evaluate the following expressions

   A. (4 - 7) * 3 -9
   B. 14 % 4 2
   C. 24 / 9 2
   D. 6.72 / 4.2 1.6
   E. 2 + 8 * 3 + 7 33

4. What is the output of the following program.

```
#include <iostream>
#include <iomanip>
using namespace std;
int main ()
{   int hr, min;
    hr = 1;
    min = 50;
    cout << "The exam is over at "  <<  hr  << ":" << min << endl;
    cout << "One down\n " << "two to go!" ;
    return 0;
}
```

   The exam is over at 1:50
   One down
   two to go!

5. What is the output of the following program

```
#include <iostream>
#include <iomanip>
using namespace std;
int main()
{   int  WholeNumber;
    double Real1, Real2;
    WholeNumber = 76;
    Real1 = 3.167;
    Real2 = -24.103;
    cout << setw(6)  << WholeNumber << endl;
    cout << setiosflags(ios::fixed);
    cout << setprecision(2) << Real1 << ", " << Real2 << endl;
    cout << setiosflags(ios::showpoint)  << Real2 << 8.376 << endl;
    return 0;
}
```

```
    76
3.17, -24.10
-24.108.38
```

6. Which of the following are valid on the left side of an assignment operator?
   A. A numeric constant
   B. An expression such as 8*6
   C. A declared constant
   D. A variable
   E. All of the above are valid on the left side of an assignment operator.

7. Which of the following are valid on the right side of an assignment operator?
   A. A numeric constant
   B. An expression such as 8*6
   C. A declared constant
   D. A variable
   E. All of the above are valid on the right side of an assignment operator.

8. The operator >> is used to
   A. Extract a value from the input stream and assign it to a variable
   B. Take a value from a variable and place it into the output stream
   C. Perform integer division and produce the remainder of the division
   D. Specify that the left hand operand is much larger than the right hand operand.

9. The file which must appear in a #include preprocessor statement if you are using the fabs function is …
   A. iostream
   B. iomanip
   C. cmath
   D. string

10. Which of the following is not a data type used to represent a floating point value
    A. float
    B. double
    C. long double
    D. short

11. Which of the following is not a syntactically correct declaration?
    A. int number(12);
    B. double value1(4.5); value2(3.7);
    C. double tax_percent =0.06;
    D. double x{0.0};
    E. int x,y,z;

12. Which of the following operators is the increment operator
    A. +=
    B. +
    C. %
    D. ++

13. Which output flag is set to guarantee that a decimal point will be printed when printing a floating point value?
    A. fixed
    B. showpoint
    C. precision
    D. setw

14. Function arguments are …
    A. the term used for the name of the function
    B. the term that refers to the value returned by a function
    C. the term that refers to the values passed to the function when the function is invoked.
    D. the term that refers to a function invocation.

15. Which of the following function invocations is an approximation of PI
    A. atan(-1);
    B. acos(-1);
    C. sin(-1);
    D. cos(-1);

16. Line comments begin with // and run for the rest of the line
    A. true
    B. false

17. The purpose of a comment is to help the compiler understand your program and create efficient object code.
    A. true
    B. false

18. The math function sin will compute sine when given the angle in degrees
    A. true
    B. false

19. The setw manipulator is used to set the field width for all values that are printed until another setw manipulator is encountered.
    A. true
    B. false

20. The preprocessor directive #include <iostream> copies the file iostream into the program before compilation, so that the program can use input and output objects and operators.
    A. true
    B. false

21. The operand of the increment operator may be either a declared constant or a variable.
    A. true
    B. false

22. The math function tan will compute tangent when the angle is given in radians.
    A. true
    B. false

23. In a case sensitive language, such as C++, the variables **apples** and **APPLES** refer to different storage locations.
    A. true
    B. false

24. An expression involving operators can appear after the output operator << in a cout statement.
    A. true
    B. false

25. The precision of a floating point number is determined by the number of bits used to represent the exponent.
    A. true
    B. false

26. Given the declaration `auto i = 0;` `i` is declared as an `int`.

    A. True
    B. False

27. Given the declaration `auto i = 1.0;` `i` is declared as type `double.`
    A. True
    B. False

28. C++ is a strongly typed programming language.
    A. True
    B. False
    C.
29. Symbolic constants in C++ are declared with the modifier const; attempting to change the value of a symbolic constant will be flagged as a syntax error by the compiler.
    A. True
    B. False

30. Class declarations specify a programmer-defined type/object.
    A. True
    B. False

31. Class members may include data (attributes) and methods (functions).
    A. True
    B. False

32. Which of the following visibilities by be used to control access to class members:
    A. public
    B. protected
    C. private
    D. All of these are visibilities used to control access to class members.

33. Class attributes define the operations that may be performed on class objects.
    A. True
    B. False

34. Constructors are special methods of a class that are executed when objects of the class type are created.
    A. True
    B. False

35. Constructors must have the same name as the class
    A. True
    B. False

36. There must be exactly one constructor defined in every class.
    A. True
    B. False

37. Once a class is defined, you may use the class as a type specifier.
    A. True
    B. False

1. Match each of the following data types with literal constants of that data type. A data type can be used more than once.

A. integer	_____	1.427E3
B. double	_____	"Oct"
C. character	_____	-63.29
D. string	_____	#Hashtag
E. boolean	_____	'+'
F. none of the above.	_____	-85
	_____	true
	_____	'\''

2. For each of the following determine if it is a valid identifier, and if it is not state why.
   A. House#
   B. 2nd
   C. WHILE
   D. num4
   E. double
   F. last_name

3. Evaluate the following functions
   A. (4 - 7) * 3
   B. 14 % 4
   C. 24 / 9
   D. 6.72 / 4.2
   E. 2 + 8 * 3 + 7

4. What is the output of the following program.

```
#include <iostream>
#include <iomanip>
using namespace std;
int main ()
{   int hr, min;
    hr = 1;
    min = 50;
    cout << "The exam is over at "  <<  hr  << ":" << min << endl;
    cout << "One down\n " << "two to go!" ;
    return 0;
}
```

5. What is the output of the following program

```
#include <iostream>
#include <iomanip>
using namespace std;
int main()
{   int  WholeNumber;
    double Real1, Real2;
    WholeNumber = 76;
    Real1 = 3.167;
    Real2 = -24.103;
    cout << setw(6)  << WholeNumber << endl;
    cout << setiosflags(ios::fixed);
    cout << setprecision(2) << Real1 << ", " << Real2 << endl;
    cout << setiosflags(ios::showpoint)  << Real2 << 8.376 << endl;
    return 0;
}
```

6. Which of the following are valid on the left side of an assignment operator?
   A. A numeric constant
   B. An expression such as 8*6
   C. A declared constant
   D. A variable
   E. All of the above are valid on the left side of an assignment operator.

7. Which of the following is valid on the right side of an assignment operator?
   A. A numeric constant
   B. An expression such as 8*6
   C. A declared constant
   D. A variable
   E. All of the above are valid on the right side of an assignment operator.

8. The operator >> is used to
   A. Take a value from the input stream an store it into a variable
   B. Take a value from a variable and place it into the output stream
   C. Perform integer division and produce the remainder of the division
   D. Specify that the left hand operand is much larger than the right hand operand.

9. The file which must appear in a #include preprocessor statement if you are using the fabs function is …
   A. iostream
   B. iomanip
   C. cmath
   D. string

10. Which of the following is not a data type used to represent a floating point value
    A. float
    B. double
    C. long double
    D. short

11. Which of the following is not a syntactically correct declaration?
    A. int number(12);
    B. double value1(4.5); value2(3.7);
    C. double tax_percent =0.06;
    D. double x{0.0};
    E. int x,y,z;

12. Which of the following operators is the increment operator
    A. +=
    B. +
    C. %
    D. ++

13. Which output flag is set to guarantee that a decimal point will be printed when printing a floating point value?
    A. fixed
    B. showpoint
    C. precision
    D. setw

14. Function arguments are …
    A. the term used for the name of the function
    B. the term that refers to the value returned by a function
    C. the term that refers to the values passed to the function when the function is invoked.
    D. the term that refers to a function invocation.

15. Which of the following function invocations is an approximation of PI
    A. atan(-1);
    B. acos(-1);
    C. sin(-1);
    D. cos(-1);

16. Line comments begin with // and run for the rest of the line
    A. true
    B. false

17. The purpose of a comment is to help the compiler understand your program and create efficient object code.
    A. true
    B. false

18. The math function sin will compute sine when given the angle in degrees
    A. true
    B. false

19. The setw manipulator is used to set the field width for all values that are printed until another setw manipulator is encountered.
    A. true
    B. false

20. The preprocessor directive #include <iostream> copies the file iostream into the program before compilation, so that the program can use input and output objects and operators.
    A. true
    B. false

21. The operand of the increment operator may be either a declared constant or a variable.
    A. true
    B. false

22. The math function tan will compute tangent when the angle is given in radians.
    A. true
    B. false

23. In a case sensitive language, such as C++, the variables **apples** and **APPLES** refer to different storage locations.
    A. true
    B. false

24. An expression involving operators can appear after the output operator << in a cout statement.
    A. true
    B. false

25. The precision of a floating point number is determined by the number of bits used to represent the exponent.
    A. true
    B. false

26. Given the declaration `auto i = 0;` `i` is declared as an `int`.
    A. True
    B. False

27. Given the declaration `auto i = 1.0;` `i` is declared as a `double`
    A. True
    B. False

28. C++ is a strongly typed programming language.
    A. True
    B. False

29. Symbolic constants in C++ are declared with the modifier const; attempting to change the value of a symbolic constant will be flagged as a syntax error by the compiler.
    A. True
    B. False

30. Class declarations specify a programmer-defined type/object.
    A. True
    B. False

31. Class members may include data (attributes) and methods (functions).
    A. True
    B. False

32. Which of the following visibilities by be used to control access to class members:
    A. public
    B. protected
    C. private
    D. All of these are visibilities used to control access to class members.

33. Class attributes define the operations that may be performed on class objects.
    A. True
    B. False

34. Constructors are special methods of a class that are executed when objects of the class type are created.
    A. True
    B. False

35. There may be exactly one constructor defined in any class.
    A. True
    B. False

36. Constructors must have the same name as the class.
    A. True
    B. False

37. Once a class is defined, you may use the class as a type specifier.
    A. True
    B. False
