

Chapter 02_Test Bank KEY

1. In order to measure what a country produces, we:

- A. Summarize total output in physical terms.
- B. Count units of output.
- C. Count the weight of different products.
- D. Summarize the monetary value of output.**

Using monetary value instead of physical units to compare total output, the accounting is easier.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 1 Easy

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

2. GDP can be found by:

- A. Adding the monetary value of all final goods and services produced during a given period of time.**
- B. Adding the physical amount of all final goods and services produced during a given period of time.
- C. Taking the difference between exports and imports during a given period of time.
- D. Adding the value of all final output produced and measuring it in constant prices during a given period of time.

GDP is a summary measure of a nation's output.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

3. Ceteris paribus GDP most closely measures:

- A. Output per worker.
- B. A summary of the world's output.
- C. The total value of all final goods and services produced within a nation's borders in a given year.**
- D. The rate of change in capital stock.

GDP can be found by adding the monetary value of all final goods and services.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

4. The output of cell phones can be added to the output of refrigerators in order to compute GDP by:

- A. Multiplying the output of each by the corresponding prices and adding these dollar values.
- B. Dividing the output of each by price and adding these dollar values.
- C. Adding up the physical number of cell phones and refrigerators produced.
- D. Dividing dollar values of output for each by price and adding the results.

By multiplying the physical output of each good by its price the total value of each good produced can be determined.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

5. Country's GDP is:

- A. The sum of the physical amounts of goods and services in the economy.
- B. A dollar measure of output produced within a nation's borders during a given time period.
- C. A measure of the per capita economic growth rate of the economy.
- D. A physical measure of the capital stock of the economy.

GDP enables us to sum production of all goods and services

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Remember
Difficulty: 1 Easy

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

6. Which of the following is NOT included in U.S. GDP?

- A. Toys produced by a U.S. firm located in China.
- B. Beer brewed in Colorado and purchased by a German tourist.
- C. A car made by a Japanese auto producer in Kansas.
- D. Corn grown in Iowa and exported to Africa.

GDP measures only those products produced within a nation's borders.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Analyze
Difficulty: 3 Hard

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

7. Which of the following is NOT included in U.S. GDP?

- A. The construction of new homes to replace those destroyed by fires in California.
- B. The salary of the President of the United States.
- C. Shoes produced abroad and imported by a U.S. company.
- D. The purchase of U.S. soybeans by a food manufacturer in Canada.

To be counted in GDP goods must be produced within a nation's borders.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Analyze
Difficulty: 3 Hard

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

8. The value of output produced in the United States in current prices measures:

- A. GDP growth.
- B. Real GDP.
- C. Per capita GDP.
- D.** Nominal GDP.

Nominal GDP is the value of output measured in current prices.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Remember
Difficulty: 1 Easy

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

9. Nominal GDP measures the:

- A. Inflation-adjusted value of output.
- B. Real value of output per worker.
- C.** Value of output produced in current prices.
- D. Value of output produced in constant prices.

Nominal GDP is the value of output in the U.S. in current prices.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Remember
Difficulty: 1 Easy

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

10. Nominal GDP is affected by changes in:

- A. Output only.
- B.** Output and prices.
- C. Income transfers.
- D. Prices only.

Nominal GDP measures the value of output produced in current prices.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

11. Changes in real GDP serve as a better measure of the health of the economy than changes in nominal GDP because real GDP is affected by changes in:

- A.** Output only.
- B. Prices and output.

- C. Prices only.
- D. Average wages.

Real GDP is the inflation adjusted value of GDP.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

12. The inflation-adjusted value of final goods and services produced in the United States measures:

- A. Nominal GDP.
- B. Real GDP.**
- C. Per capita GDP.
- D. GDP per worker.

Real GDP is adjusted for inflation.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Remember
Difficulty: 1 Easy

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

13. Real GDP is a more accurate measure of economic growth than nominal GDP because:

- A. Nominal GDP is a total dollar measurement.
- B. Nominal GDP only increases because of an increase in production.
- C. Nominal GDP can increase due to an increase in production or prices or both.**
- D. Real GDP is a measurement of the overall price level.

Real GDP adjust for changes in price or inflation.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

14. Which of the following is the best measure of an increase in actual output?

- A. Nominal GDP.
- B. Real GDP.**
- C. Per capita GDP.
- D. GDP per dollar.

Real GDP is the best measure because it adjusts for changes in price due to inflation.

Accessibility: Keyboard Navigation
Blooms: Remember
Difficulty: 1 Easy

15. Which of the following countries currently has the largest GDP?

- A. Japan.
- B. China.
- C. Britain.
- D.** United States.

Because of the vast natural resources, the U.S. has the largest GDP.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-02 Describe the absolute and relative size of the U.S. economy.
Topic: WHAT AMERICA PRODUCES

16. The economy of the United States is important because it:

- A. Produces as much output as China, Japan, and Western Europe combined.
- B.** Produces about 20 percent of total world output.
- C. Exceeds the combined production of all other countries in the world.
- D. Accounts for over 20 percent of total world population.

Of the \$80 trillion of global output in 2012, the U.S. had \$15 trillion in output.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-02 Describe the absolute and relative size of the U.S. economy.
Topic: WHAT AMERICA PRODUCES

17. U.S. GDP for 2015 was approximately:

- A. \$11 trillion.
- B. \$100 billion.
- C.** \$ 18 trillion.
- D. \$20 trillion.

Refer to 2012 statistical data in Chapter 2, p. 33.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-02 Describe the absolute and relative size of the U.S. economy.
Topic: WHAT AMERICA PRODUCES

18. To compare the standard of living of one country to another, economists use:

- A.** Per capita GDP.
- B. Real GDP.
- C. Nominal GDP.
- D. Output per worker.

Per capita is an indicator of how much each person would receive of output if output would be divided equally.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Remember
Difficulty: 1 Easy

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

19. Per capita GDP is the most practical way to:
- A. Measure how much income households receive.
 - B. Measure how much output can be consumed on a sustainable basis.
 - C. Measure how much output is potentially available to the average person.**
 - D. Analyze the growth rate of the economy over time.

Per capita GDP is an indicator of how much each person would receive of output if output would be divided equally.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

20. In 2015, per capita GDP in the United States was approximately:
- A. \$41,000.
 - B. \$53,000.**
 - C. \$35,000.
 - D. \$51,000.

Refer to 2012 statistical data in Chapter 2.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-02 Describe the absolute and relative size of the U.S. economy.
Topic: WHAT AMERICA PRODUCES

21. Per capita GDP will always rise when:
- A. The population rises.
 - B. The rate of economic growth increases.
 - C. There is an increase in the rate at which the economy's labor force grows.
 - D. The rate of economic growth exceeds the rate of population growth.**

When GDP growth exceeds population growth per capita GDP will rise.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

22. If output growth exceeds population growth for a country, then:

- A.** Average living standards will increase.
- B. GDP must have grown at a very rapid rate.
- C. Per capita GDP will decrease.
- D. This country must have overcome the problem of scarcity.

Economic growth keeps adding to our standard of living.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Analyze
Difficulty: 3 Hard

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

23. If all of our GDP were distributed equally across the United States, each individual would receive:

- A. Their current income divided by the U.S. population.
- B. The market value of final goods and services produced in the U.S. per year.
- C. The value of total world output divided by the population.
- D.** The market value of final goods and services produced in the U.S. per year divided by the population.

Per capita GDP is an indicator of how much output each person would get if all output were divided evenly among the population.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Analyze
Difficulty: 3 Hard

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

24. When comparing GDP per capita globally, which list ranks countries correctly from largest to smallest?

- A. China, Mexico, Germany.
- B.** Japan, Mexico, Haiti.
- C. Mexico, France, India.
- D. Greece, Japan, Indonesia.

See Figure 2.1 in text.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

25. Country A and Country B both recorded an increase in real GDP of 5 percent per year from 1980 to 2012. During this time, the population for Country A grew at 6 percent per year and the population for Country B grew at 4 percent. Which of the following is true during this period?

- A. Per capita GDP was the same for both Country A and Country B.
- B. Per capita GDP decreased for Country B only.
- C. Per capita GDP decreased for both Country A and Country B.
- D.** Per capita GDP decreased for Country A only.

Even though both countries have experienced the same percent of growth, because the percentage of growth for Country A was larger they will have to spread the output over more people.

AACSB: Reflective Thinking
Accessibility: Keyboard Navigation
Blooms: Analyze
Difficulty: 3 Hard

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

26. Country D and Country E both recorded an increase in real GDP of 4 percent per year from 1997 to 2012. During this time, the population for Country D grew at 3 percent per year and the population for Country E grew at 2 percent. Which of the following is true during this period?

- A. Per capita GDP decreased for both Country D and Country E.
- B.** Per capita GDP increased for both Country D and Country E.
- C. Per capita GDP increased for Country D only.
- D. Per capita GDP decreased for Country E only.

Since the percentage of growth in population is lower than the percentage of growth in real GDP, both countries experience per capita increases.

AACSB: Reflective Thinking
Accessibility: Keyboard Navigation
Blooms: Analyze
Difficulty: 3 Hard

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

27. Economic growth implies that:

- A. Prices have risen.
- B.** Total value of the output produced has increased.
- C. Per capita GDP has declined.
- D. Resources are limited.

Continued economic growth implies more output per person.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Remember
Difficulty: 1 Easy

Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

28. Economic growth:

- A.** Is an increase in output or real GDP.
- B. Causes a contraction in the production possibilities curve.
- C. Involves reduced capacity in the short run.
- D. Cannot be sustained over time.

Economic growth is an increase in output, (real GDP) an expansion of production possibilities.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Remember
Difficulty: 1 Easy

Blooms: Understand
Difficulty: 2 Medium
Learning Objective: 02-04 Recount how the mix of U.S. output has changed over time.
Topic: WHAT AMERICA PRODUCES

34. Suppose during a year an economy produces \$6 trillion of consumer goods, \$1 trillion of investment goods, \$2 trillion in government services, and has \$3 trillion of exports and \$2 trillion of imports. GDP would be:

- A. \$8 trillion.
- B. \$10 trillion.**
- C. \$12 trillion.
- D. \$14 trillion.

Imports must first be subtracted from exports.

AACSB: Reflective Thinking
Accessibility: Keyboard Navigation
Blooms: Apply
Difficulty: 3 Hard
Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

35. Suppose during a year an economy produces \$10 trillion of consumer goods, \$4 trillion of investment goods, \$6 trillion in government services, and has \$4 trillion of exports and \$5 trillion of imports. GDP would be:

- A. \$19 trillion.
- B. \$21 trillion.
- C. \$24 trillion.
- D. \$29 trillion.

Imports must first be subtracted from exports.

AACSB: Reflective Thinking
Accessibility: Keyboard Navigation
Blooms: Apply
Difficulty: 3 Hard
Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

36. The largest component of U.S. GDP is:

- A. Government services at the federal, state and local levels combined.
- B. Business investment.
- C. Household consumption.
- D. Net exports.

Consumer goods dominate the U.S. mix of output.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium
Learning Objective: 02-04 Recount how the mix of U.S. output has changed over time.
Topic: WHAT AMERICA PRODUCES

37. Consumer goods:

- A. Account for over two-thirds of total U.S. output.
- B. Include nondurable goods but not durable goods.
- C. Account for a smaller portion of GDP than government services.
- D. Include durable and nondurable goods but not services.

See Figure 2.2 in the text book.

AACSB: Analytic

Topic: WHAT AMERICA PRODUCES

40. Which of the following is included in investment, according to economists?

- A.** Production of plant and machinery.
- B. Purchases of corporate stock.
- C. Money put into a pension fund.
- D. Dollars spent in the stock market.

Investments include plants, machinery, equipment and inventories held for later sale to consumers.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-04 Recount how the mix of U.S. output has changed over time.
Topic: WHAT AMERICA PRODUCES

41. Investment includes all of the following EXCEPT:

- A. The production of new factories.
- B. The purchase of new machinery and equipment.
- C.** Money in a retirement fund.
- D. Business inventories.

Economic investments enhance our capacity to produce.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-04 Recount how the mix of U.S. output has changed over time.
Topic: WHAT AMERICA PRODUCES

42. Which of the following is NOT an example of investment, according to economists?

- A. A business builds a new factory.
- B. A private college buys a new copy machine to replace an old worn out machine.
- C. A family buys \$10,000 worth of bonds.**
- D. A department store buys additional men's jeans just before Christmas.

Economic investments enhance our capacity to produce.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Analyze
Difficulty: 3 Hard

Learning Objective: 02-04 Recount how the mix of U.S. output has changed over time.
Topic: WHAT AMERICA PRODUCES

43. Which of the following is an example of investment, as a component of GDP?

- A. The purchase of a truck by a delivery company.**
- B. The purchase of Ford stock by an individual saving for retirement.
- C. The purchase of land by an individual.
- D. The purchase of bridges and dams by the government.

GDP is the measurement of all final goods and services.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Analyze
Difficulty: 3 Hard

Topic: WHAT AMERICA PRODUCES

44. Which of the following expenditures is the most important in expanding a country's production possibilities?

- A. Consumer goods.
- B. Investment goods.**
- C. Government services.
- D. Net exports.

Investment goods are critical to continuing growth.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Analyze
Difficulty: 3 Hard

Learning Objective: 02-04 Recount how the mix of U.S. output has changed over time.
Topic: WHAT AMERICA PRODUCES

45. Which of the following is NOT true about investment goods?

- A. They add to the nation's stock of capital.
- B. They can be used to replace worn-out equipment.
- C. They can expand the nation's production possibilities.
- D. They increase the retirement benefits for individuals.**

Economic investment enhances our capacity to produce.

46. According to your textbook, for the United States, investment accounts for approximately _____ percent of GDP.

- A.** 13.
- B. 25.
- C. 35.
- D. 70.

See Figure 2.2 in the text book.

47. Which of the following is true about government services as a component of GDP?

- A. It includes welfare benefits.
- B.** It includes spending on national defense.
- C. It includes Social Security benefits.
- D. It includes federal government spending but not state and local spending.

Only that part of federal spending used to acquire resources and produce service is counted in GDP.

48. Government services:

- A. Are larger than consumption in the United States.
- B. Includes the dollars spent on income transfers.
- C.** Includes federal, state, and local government purchases of goods and services.
- D. Equals approximately \$10 trillion per year in the United States.

These branches of government build highways, write law, and police the streets to name just a few items.

49. Which of the following is not included in GDP as part of government services?

- A.** Social Security benefits.
- B. Military equipment.
- C. Highways and bridges.
- D. Education.

Social Security is an income transfer; therefore it is not a part of output.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-04 Recount how the mix of U.S. output has changed over time.
Topic: WHAT AMERICA PRODUCES

50. As a portion of GDP, government purchases include:

- A. Food stamps.
- B.** National defense expenditures.
- C. Unemployment benefits.
- D. Welfare checks.

National defense spending is production of real goods and services. The others are transfer payments.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-04 Recount how the mix of U.S. output has changed over time.
Topic: WHAT AMERICA PRODUCES

51. Government income transfers are NOT included in the calculation of GDP because:

- A. It is difficult to measure the value of these payments.
- B. Most of these payments are paid to foreign immigrants.
- C. These payments do not have an impact on the WHAT question.
- D.** These payments do not reflect the production of goods and services.

Only that part of federal spending used to acquire resources and produce services is counted in GDP.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Analyze
Difficulty: 3 Hard

Learning Objective: 02-05 Describe how (un)equally incomes are distributed.
Topic: WHAT AMERICA PRODUCES

52. Income transfers include:

- A. Food provided by a privately funded food bank.
- B.** Housing provided at a reduced cost by the government.
- C. Free medical care provided by a retired doctor.
- D. The money saved when clothing is purchased on sale.

Reduced cost housing is a type of transfer payment.

AACSB: Reflective Thinking

Learning Objective: 02-04 Recount how the mix of U.S. output has changed over time.
Topic: WHAT AMERICA PRODUCES

57. GDP is the sum of consumption, investment, government purchases, and:

A. The factors of production.

B. Net exports.

C. Saving.

D. Capital stock.

Exports are factored into GDP.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Remember
Difficulty: 1 Easy

Learning Objective: 02-04 Recount how the mix of U.S. output has changed over time.
Topic: WHAT AMERICA PRODUCES

58. U.S. net exports are:

A. Equal to the value of exports minus the value of imports.

B. Positive if the U.S. imports more than it exports.

C. A larger portion of GDP than investment.

D. Always equal to zero.

The value of exports minus the value of imports equals net exports.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Remember
Difficulty: 1 Easy

Learning Objective: 02-04 Recount how the mix of U.S. output has changed over time.
Topic: WHAT AMERICA PRODUCES

59. Net exports measures the:

A. Total dollar value of U.S. exports.

B. Dollar amount of imports.

C. Quantity of goods produced abroad.

D. Dollar value of exports minus the dollar value of imports.

U.S. net exports are equal to the value of exports minus the value of imports.

Learning Objective: 02-04 Recount how the mix of U.S. output has changed over time.
Topic: WHAT AMERICA PRODUCES

60. The decline in employment in the farm sector in the U.S. during the 1900s can be attributed primarily to:

- A. New technology that made it possible to grow more food with fewer workers.
- B. An increase in the importance of the manufacturing sector.
- C. Competition from imported agricultural products.
- D. A decline in the amount of food consumption per person.

New technology makes it possible to grow more food with fewer workers.

Blooms: Analyze
Difficulty: 1 Easy

Learning Objective: 02-04 Recount how the mix of U.S. output has changed over time.
Topic: WHAT AMERICA PRODUCES

120. The manufacturing share of output has increased in the United States since World War II.

FALSE

The manufacturing and agricultural shares have decreased while the services share has increased.

Blooms: Understand
Difficulty: 2 Medium
Learning Objective: 02-04 Recount how the mix of U.S. output has changed over time.
Topic: WHAT AMERICA PRODUCES

121. A capital-intensive production process increases the level of output per worker.

TRUE

Capital goods greatly assist in increasing the level of output per person.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium
Learning Objective: 02-03 Explain why the U.S. economy can produce so much.
Topic: HOW AMERICA PRODUCES

122. The reason that U.S. productivity is so high is because the United States has more natural resources and a larger population than any other country in the world.

FALSE

Population does not contribute to productivity.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Analyze
Difficulty: 3 Hard
Learning Objective: 02-03 Explain why the U.S. economy can produce so much.
Topic: HOW AMERICA PRODUCES

123. The United States has invested heavily in human capital by promoting education and skill training.

TRUE

More than other places in the world, the US has higher rates of high school and college graduation.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 1 Easy
Learning Objective: 02-03 Explain why the U.S. economy can produce so much.
Topic: HOW AMERICA PRODUCES

124. U.S. corporations account for the majority of output in the country even though proprietorships outnumber corporations.

TRUE

Corporations dominate market transactions, accounting for almost 90 percent of all business sales.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-03 Explain why the U.S. economy can produce so much.
Topic: HOW AMERICA PRODUCES

125. In a monopoly situation, government regulation is incapable of improving market outcomes.

FALSE

Government regulations are intended to protect the interests of consumers, preventing firms from becoming too powerful.

AACSB: Analytic
Blooms: Analyze
Difficulty: 3 Hard

Learning Objective: 02-04 Recount how the mix of U.S. output has changed over time.
Topic: HOW AMERICA PRODUCES

126. Externalities are costs or benefits of a market activity borne by a third party.

TRUE

The cost or benefits of externalities are spread to innocent third parties.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Remember
Difficulty: 1 Easy

Learning Objective: 02-04 Recount how the mix of U.S. output has changed over time.
Topic: HOW AMERICA PRODUCES

127. Incomes are distributed more equally in poor countries than in rich ones because of transfer payments.

FALSE

Most poor countries do not have a system of transfer payments like welfare.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-05 Describe how (un)equally incomes are distributed.
Topic: FOR WHOM AMERICA PRODUCES

128. The U.S. federal income tax is an example of a progressive tax.

TRUE

A progressive tax makes after-tax incomes more equal than before-tax incomes.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium
Learning Objective: 02-05 Describe how (un)equally incomes are distributed.
Topic: HOW AMERICA PRODUCES

129. The U.S. tax-transfer system gives more output to lower-income households than does the market alone.

TRUE

The income-transfer system gives lower-income households more output than the market itself would provide.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium
Learning Objective: 02-05 Describe how (un)equally incomes are distributed.
Topic: HOW AMERICA PRODUCES

130. Why is using real GDP a better measurement of GDP than using nominal GDP?

GDP is based on both physical output and prices. From one year to the next either rising prices or an increase in physical output could cause nominal GDP to increase. GDP numbers must be adjusted for inflation. These inflation adjustments delete the effects of rising prices by valuing output in constant prices. This is result of real GDP.

AACSB: Analytic
Accessibility: Keyboard Navigation
Blooms: Analyze
Difficulty: 3 Hard
Learning Objective: 02-01 Explain how an economy's size is measured.
Topic: WHAT AMERICA PRODUCES

131. Investment goods are a different type of output. Discuss the types of investment goods and its relationship to production possibilities.

Investment goods include the plant, machinery, and equipment that are produced for use in the business sector. These investments are often used to replace worn-out equipment and factories, which maintains production possibilities.

Investment goods increase and improve the stock of capital. This expands production possibilities.

Inventory is also counted as investment goods.

Difficulty: 3 Hard
Learning Objective: 02-04 Recount how the mix of U.S. output has changed over time.
Topic: WHAT AMERICA PRODUCES*

132. What does the government do to protect consumers from monopolies? List specific steps the government takes to protect consumers.

Government tries to prevent individual firms from dominating specific markets. Antitrust laws prohibit mergers or acquisitions that threaten competition. The U.S. Department of Justice and the Federal Trade Commission also regulate pricing practices, advertising claims, and other behavior that might put consumers at an unfair disadvantage in product markets.

Blooms: Remember

Difficulty: 1 Easy

Learning Objective: 02-03 Explain why the U.S. economy can produce so much.

Topic: WHAT AMERICA PRODUCES

137. Which of these is NOT included in GDP?

- A.** government transfer payments to Social Security beneficiaries
- B. consumer spending on durable and nondurable goods
- C. business investment in new equipment
- D. net exports

A is the correct answer because there is no production associated with government transfer payments.

Accessibility: Keyboard Navigation
Blooms: Understand
Difficulty: 2 Medium

Learning Objective: 02-03 Explain why the U.S. economy can produce so much.
Topic: WHAT AMERICA PRODUCES

142. The United States' economy is the largest in the world because

- A. it has a high quantity and quality of capital resources.
- B. the government directs resources to the most desirable outcomes.
- C. it has abundant natural and human resources.
- D. Both A and C are correct.**

The United States benefits from an abundance of the factors of production—including land (natural resources) and labor (human resources), as well as having capital resources in sufficient quantity and quality to raise productivity levels.
