- a. \$48 per machine hour
 - b. \$62 per machine hour
 - c. \$45 per machine hour
 - d. \$50 per machine hour

ANSWER: b

RATIONALE: Predetermined Overhead Rate = Estimated Total Overhead Costs / Estimated Activity
Base = \$15,500,000 / 250,000 machine hours = \$62 per machine hour

Year to date, the actual overhead is \$16,000,000 and the actual machine hours are 330,000 hours. If the Thomlin Company uses a predetermined overhead rate based on machine hours for applying overhead, as of this point in

Chapter 2 - Job Order Costing

time (year to date), the overhead is

- a. \$1,000,000 overapplied
- b. \$1,000,000 underapplied
- c. \$500,000 overapplied
- d. \$500,000 underapplied

ANSWER:

c

RATIONALE:

Predetermined Overhead Rate = Estimated Total Overhead Costs / Estimated Activity
Base = \$15,000,000 / 300,000 machine hours = \$50 per machine hour
Applied overhead = Predetermined overhead rate × Actual machine hours = \$50 × 330,000 machine hours = \$16,500,000
Overapplied overhead = Applied overhead – Actual overhead = \$16,500,000 – \$16,000,000 = \$500,000

- b. decrease by \$1,700,000
- c. increase by \$3,400,000
- d. decrease by \$3,400,000

ANSWER:

a

RATIONALE:

Net income will increase since overheads have been overapplied.
Increase in net income = Applied overhead – Actual overhead = \$42,000,000 – \$40,300,000 = \$1,700,000

141. Define and discuss the two main types of cost accounting systems for manufacturing operations. What are their similarities and differences?

ANSWER:

The two main types of cost accounting systems are job order cost systems and process cost systems.

A job order cost system provides product costs for each quantity of product that is manufactured. Each quantity of product that is produced is called a job. This type of system is used by companies that manufacture custom products or batches of similar products.

A process cost system provides product costs for each manufacturing department or process. Process cost systems are used by companies that manufacture products that are indistinguishable from each other and manufactured using a continuous process.

They are similar in that both systems are widely used and a company may use both—job order for some products and process costing for others.

167. On November 2, Newsprint Manufacturing purchases 5 rolls of paper on account at \$125 per roll for use within the production process. On November 5, 4 rolls of this paper are issued to Job 157A in the Printing Department. The Printing Department records \$675 in direct labor and \$1,150 of factory overhead to Job 157A. On November 8, Printing transfers Job 157A to the Folding Department. The Folding Department applies \$450 in direct labor and \$655 in factory overhead to Job 157A. Job 157A is transferred to Finished Goods inventory on November 9.

- (a) Journalize the purchase of the paper.
- (b) Journalize the transfer of raw materials to work in process, the application of direct labor, and the application of manufacturing overhead to Job 157A while in the Printing Department.
- (c) Journalize the transfer of Job 157A to the Folding Department at actual cost.
- (d) Journalize the application of direct labor and the application of manufacturing overhead to Job 157A while in the Folding Department.

168. On May 15, the stamping department accepted Job 051507A to make 1,000 funnels. Materials requisitioned were 1,100 sheets at \$1.20 per sheet and 1,150 grommets at \$0.15 per set. The cost driver used by stamping department is the drop-forge strokes indicated by a machine mounted counter. Overhead is applied at \$2.25 for each drop-forge stroke. Additionally, \$375.00 of overhead is applied to each job due to setup and tear down. Direct labor is applied at \$22.50 per hour for the machine operator and \$11.10 for the machine loader. The job required 6.5 hours of labor.

Upon completion, the job was transferred to Finished Goods Inventory.

(b) The factory overhead balance is relatively small; prepare the journal entry to close the Factory Overhead account assuming a credit balance. What does a credit balance mean?

ANSWER:

(a) Cost of Goods Sold 30,000
 Factory Overhead 30,000

A debit balance indicates that the factory overhead was underapplied.

(b) Factory Overhead 30,000
 Cost of Goods Sold 30,000

174. Discuss how job order cost information is used in decision making. What are some possible reasons that actual cost of materials would exceed expected costs for a job?

ANSWER:

Since a job order cost system provides product costs for each quantity of product that is manufactured, total and unit product costs can be compared to similar jobs or expected costs. Thus, a job order cost system can be used by managers for cost evaluation and control.

Possible reasons that actual material costs would exceed expected cost include: poorly trained employees, poor quality materials, faulty equipment, or incorrect instructions.

175. Discuss the use of job order costing for professional services businesses. What are the similarities and differences between service and manufacturing business job order costing?

ANSWER: Professional service providers—attorneys, physicians, advertising agencies, etc.—may use job order cost accounting systems. In such cases, clients are considered jobs.

Like manufacturers, direct labor and overhead costs for service companies are accumulated in work in process accounts. Unlike manufacturers, materials cost for service companies are usually insignificant and treated as overhead. When a job is completed, it is transferred to Cost of Services, which is similar to Cost of Goods Sold. Service companies do not use Finished Goods accounts.
