Additional Case 2.1

Benson Manufacturing is a young, small firm that makes computer components and peripherals for assemblers like Dell and Gateway. Benson's market share is highly volatile based on the entrance and exit of competitors into the market. Benson buys raw materials from several suppliers who also supply competitors. The firm has two layers of management between the CEO and the component maker on the line.

The firm's CEO read a book about innovation and organizational change and now wants to look at what HR should do about reorganizing and changing staffing practices. The CEO wants to reduce costs in order to increase profit margins because he believes that margins will continue to shrink.

While productivity and quality are largely functions of the machines used in the process, the CEO still wants to focus on motivating Benson employees. He wants to motivate them by increasing wages through a bonus program, improving working conditions, and providing job security.

18) Refer to Additional Case 2.1. Based on the current market situation, what business strategy would be best for Benson?

- A) Prospector strategy
- B) Defender strategy
- C) Tactical strategy
- D) Differentiated strategy

Answer: A

Diff: 3

AACSB: Reflective thinking

Additional Case 2.2

You are the HR manager at Steel City, Inc., a firm that is considering going global in its product line and markets. The president realizes that this may require a reorganization. She wants to move into new international markets with minimum time and effort. She also wants to reduce management overhead and labor costs.

At the same time, employees have been complaining about their work. Jobs are repetitive, and employees don't know how their work fits into the big picture. The president wants to provide employees with satisfying work, autonomy, and a performance-based pay system. She wants to give them as much control as possible and remove layers of management.

20) Refer to Additional Case 2.2. The best organizational design match for Steel City would most likely be a:

- A) flat organizational structure.
- B) generic organizational structure.
- C) boundaryless organizational structure.
- D) bureaucratic organizational structure.

Answer: C

Diff: 3

AACSB: Reflective thinking

Additional Case 2.3

Resources International, Inc. (RII) is going through a major organizational change. Executives at the firm have decided to rethink the whole organization. They believe that employees will be most strongly motivated by experiencing meaningful work, taking responsibility for outcomes, and receiving regular feedback.

The HR team will analyze jobs as part of the change process, and HR must choose the best technique for the situation. HR needs to know what the incumbents do in their jobs. HR also needs behavioral descriptions from which to build new performance appraisal systems and training programs.

Finally, RII is looking at current staffing practices and trying to decide what type of workforce is best for the future. The business is highly technical and requires highly experienced employees, but product demand is volatile. Demand can double or be cut in half from one year to the next, depending on the economy and competitors' actions. Innovation is key in RII's product development. In order to manage all the HR information generated for and during the change, RII has initiated an HRIS system.

60) Refer to Additional Case 2.3. The best job analysis technique for RII would be a:

- A) critical incident technique.
- B) task inventory analysis.
- C) functional job analysis.
- D) methods analysis.

Answer: A

AACSB: Analytical thinking

Skill: Concept

LO: 2.3: Understand the individual perspective of work

67) What are the four perspectives on employee motivation? What are the key elements of each perspective? What are the weaknesses of each perspective? How can job design affect employee motivation?

Answer: Summary of suggested answer -

Theories-two-factor by Herzberg, work adjustment, goal-setting by Locke, and job characteristics by Hackman and Oldham.

Key Elements—

- Two-factor — Motivators are internal job factors that lead to satisfaction. Hygiene or maintenance factors are external to job and only relate to dissatisfaction, and lack of these elements leads to dissatisfaction.
- Work adjustment — Employee motivation depends on the fit between employee needs and abilities and characteristics of the job.
- Goal-setting — Employees work to expectations, and clear challenging goals motivate performance.
- Job characteristics — The presence or absence of five core characteristics and three psychological states determines the level of employee job satisfaction.

All the theories of employee motivation suggest that jobs can be designed to increase motivation and performance. Job design is the process of organizing work into the tasks required to perform a specific job.

LO: 2.4: Develop competence in designing jobs and conducting job analysis

120) Compare bureaucratic, flat, and boundaryless organizational designs. What business strategies and job design methods are appropriate for each type of structure?

Answer: Summary of suggested answer -

- Bureaucratic — defender strategy, works well in stable, predictable environments. Noted for top-down management, job specialization, defined boundaries, and minimal employee involvement in decision making. Work simplification is an effective way to use labor efficiently.
- Flat — prospector strategy, works well in rapidly changing environments, facilitates entrepreneurship. Noted for decentralized decision making, few management layers, organized by product/service/customer, independent business units, often uses work teams, reduces boundaries between workers, work units, etc. Team-based job designs effective.
- Boundaryless — prospector strategy, works well in volatile industries. Noted for forming relationships with other organizations, customers, and suppliers to pool resources for mutual benefit. Shares characteristics of a flat organization. Job enrichment can be effective if it involves more interactions with customers. Team-based job designs effective.

LO: 2.4: Develop competence in designing jobs and conducting job analysis

121) Teams and flexible work schedules are both being implemented more frequently in modern corporations. Discuss two types of teams and two types of flexible work schedules that firms use to increase employee productivity and satisfaction.

Answer: Summary of suggested answer -

Teams:

- Self-managed — assume self-direction, assume management duties, etc. Part of TQM programs. Often affects organizational structure in order to implement. Employees need training in three types of skills: technical, administrative, and interpersonal.
- Problem-solving team — quality circles, etc. Consist of volunteers, doesn't affect organizational structure.
- Special project team — complex projects, cross-functional lines. May be part of QWL projects, etc.
- Virtual teams — often have the same characteristics as problem-solving teams, but their means of communication and interaction is done by Internet or other technology, especially when the members are spread out in various areas.

Flexible work schedules: Flexible work hours divide schedules into core time and flextime. Compressed workweeks alter the number of workdays per week by increasing the length of the workday to 10 or more hours. Telecommuting allows employees to work from home full time or part time.

AACSB: Reflective thinking

Skill: Synthesis

LO: 2.4: Develop competence in designing jobs and conducting job analysis

122) What is the difference between work-flow analysis and job analysis? How do both processes benefit an organization?

Answer: Work flow is the way work is organized to meet the organization's production or service goals. Managers need to do work-flow analysis to examine how work creates or adds value to the ongoing business processes. Work-flow analysis looks at how work moves from the customer through the organization to the point at which the work leaves the organization as a product or service for the customer. After a work-flow analysis has been done and jobs have been designed, the employer needs to define and communicate job expectations for individual employees. This is best done through job analysis, which is the systematic gathering and organization of information concerning jobs. Job analysis puts a job under the microscope to reveal important details about it. Specifically, it identifies the tasks, duties, and responsibilities of a particular job.

Additional Case 2.1

Benson Manufacturing is a young, small firm that makes computer components and peripherals for assemblers like Dell and Gateway. Benson's market share is highly volatile based on the entrance and exit of competitors into the market. Benson buys raw materials from several suppliers who also supply competitors. The firm has two layers of management between the CEO and the component maker on the line.

The firm's CEO read a book about innovation and organizational change and now wants to look at what HR should do about reorganizing and changing staffing practices. The CEO wants to reduce costs in order to increase profit margins because he believes that margins will continue to shrink.

While productivity and quality are largely functions of the machines used in the process, the CEO still wants to focus on motivating Benson employees. He wants to motivate them by increasing wages through a bonus program, improving working conditions, and providing job security.

131) Refer to Additional Case 2.1. Given the market demand for computer components, the best flexible work design to use would be:

- A) part-time workers.
- B) telecommuters.
- C) condensed workweeks.
- D) temporary workers.

Skill: Concept

LO: 2.5: Have familiarity with the flexible workforce

137) What are the primary types of contingent workers. What are some motivation issues that HR managers should consider when managing contingent workers?

Answer: Summary of suggested answer -

Types (students may mention any four) temporary employees; part-time employees; subcontracted/outsourced workers; contract workers (also called freelancers or consultants); college interns.

Descriptions

- Temporary employees work for a temporary agency that provides businesses with temporary employment. These workers are reassigned to different businesses by the temporary agency when a temporary job ends.
- Part-time employees are often employed by service businesses that have a high variance in demand between peak and off-peak times. They have fewer hours than full-time core employees.
- Subcontracted/outsourced workers work for a company and often perform routine or peripheral work for another company.
- Contract workers are employees who develop a work relationship directly with an employer for a specific piece of work or time period. They are not a part of the company's headcount.
- College interns work full-time or part-time assignments (generally for one academic semester or summer) to obtain work experience. Some interns are paid, some are not.

It is not always easy to motivate a freelancer for whom you are one of several clients, each with urgent projects and pressing deadlines. Contingent workers who do not receive frequent feedback or who are not given clear goals, may not be as motivated to perform.

Additional Case 2.3

Resources International, Inc. (RII) is going through a major organizational change. Executives at the firm have decided to rethink the whole organization. They believe that employees will be most strongly motivated by experiencing meaningful work, taking responsibility for outcomes, and receiving regular feedback.

The HR team will analyze jobs as part of the change process, and HR must choose the best technique for the situation. HR needs to know what the incumbents do in their jobs. HR also needs behavioral descriptions from which to build new performance appraisal systems and training programs.

Finally, RII is looking at current staffing practices and trying to decide what type of workforce is best for the future. The business is highly technical and requires highly experienced employees, but product demand is volatile. Demand can double or be cut in half from one year to the next, depending on the economy and competitors' actions. Innovation is key in RII's product development. In order to manage all the HR information generated for and during the change, RII has initiated an HRIS system.

141) Refer to Additional Case 2.3. Managers at RII will most likely use the HRIS for which of the following activities?

- A) Conducting performance appraisals
- B) Tracking production and labor expenses
- C) Structuring and graphing the hierarchy of the organization
- D) Matching employee skills to new positions that emerge within the company

144) Job analysis is a key HR function. Provide an overview of the job analysis process, including tools and brief descriptions of key job analysis techniques. How can an HRIS improve the job analysis process?

Answer: Summary of suggested answer -

Job analysis — involves the identification of the tasks, duties, and responsibilities of a given job. It seeks answers to questions like where does the work come from, who does it, what equipment is used. It is usually conducted by HR in conjunction with the incumbent, occasionally it's done by line management.

Tools — The tools include interviews, observations, diaries, questionnaires. It is used for compliance with government regulations, recruitment and selection, performance appraisal, compensation, and training.

Techniques — There are numerous techniques. Students should choose among task inventory analysis, critical incident technique, PAQ, and functional job analysis.

A computerized HRIS contains computer hardware and software applications that work together to help managers make HR decisions. An HRIS would enable an HR manager to access job descriptions and job analyses quickly and match employees to positions.
