56. Explain the role of top management in an organization and why it is important.

ANSWER:	Top executives decide the end purpose an organization will strive for and determine the direction it will take to accomplish it. It is this purpose and direction that shapes how the organization is designed and managed. The primary responsibility of top management is to determine an organization's goals, strategy, and design, thereby adapting the organization to a changing environment. The direction-setting process typically begins with an assessment of the opportunities and threats in the external environment, including the amount of change, uncertainty, and resource availability. Top managers also assess internal strengths and weaknesses to define the company's distinctive competence compared with other firms in the industry. This competitive analysis of the internal and external environments is one of the central concepts in strategic management.

57. Briefly explain an organization's mission.

ANSWER:	The overall goal for an organization is often called the mission—the organization's reason for existence. The mission describes the organization's shared values and beliefs and its reason for being. The mission is sometimes called the official goals, which refers to the formally stated definition of business scope and outcomes the organization is trying to achieve. Official goal statements typically define business operations and may focus on values, markets, and customers that distinguish the organization. Whether called a mission statement or official goals, the organization's general statement of its purpose and philosophy is often written down in a policy manual or the annual report. One of the primary purposes of a mission statement is to serve as a communication tool. The mission statement communicates to current and prospective employees, customers, investors, suppliers, and competitors what the organization stands for and what it is trying to achieve. A mission statement communicates legitimacy to internal and external stakeholders, who may join and be committed to the organization because they identify with its stated purpose and values. Most top leaders want employees, customers, competitors, suppliers, investors, and the local community to look on the organization in a favorable light, and the concept of legitimacy plays a critical role.

58. Briefly explain operating goals. List the various operating goals in an organization.

ANSWER:	An organization's mission and overall goals provide a basis for developing more specific

operating goals. Operating goals designate the ends sought through the actual operating procedures of the organization and explain what the organization is actually trying to do. Operating goals describe specific measurable outcomes and are often concerned with the short run. Operating goals typically pertain to the primary tasks an organization must perform. Specific goals for each primary task provide direction for the day-to-day decisions and activities within departments.

Typical operating goals that define what an organization is trying to accomplish include performance goals, resource goals, market goals, employee development goals, productivity goals, and goals for innovation and change.

59. Explain a hybrid organization with examples.

ANSWER: A hybrid organization is an organization that mixes value systems and behaviors that represent two different sectors of society, which leads to tensions and conflict within the organization over goals and priorities. The goals and values of the two sides are sometimes mutually exclusive, so managers have to negotiate and come to some agreement on which direction the company will take.

Organizations with a social mission, for example, may have to hire business-minded people to sell the organization's services to provide additional income. The business-minded employees stress goals of sales, revenue, and efficiency while public service-minded employees stress goals of sacrifice and meeting social needs. When social welfare organizations have to achieve their social mission through commercial activities, managers are often caught between competing demands of market and social welfare mindsets. One group may champion for-profit priorities and the other champions the contribution to social needs. Another example of a hybrid organization is a biotechnology company that incorporates goals and mindsets of both bias-free scientific research for the sake of new knowledge versus research to develop and market potentially lucrative products. These differences in goal orientation can trigger manipulation, avoidance, or defiance on the part of one side versus the other unless managers can balance the conflicting demands.

60. Quebecor Printing is a commercial printing company that is expanding, acquiring ailing printing companies, and moving into international markets. They have completed more than 100 mergers and buyouts since 1972 and have focused on customized service by using "selective binding" to print. Apply strategies from Porter's model to make Quebecor Printing's business more profitable.

ANSWER: Michael E. Porter studied a number of business organizations and proposed that managers can make an organization more profitable and less vulnerable by adopting either a differentiation strategy or a low-cost leadership strategy. Using a low-cost leadership strategy means managers choose to compete through lower costs, whereas with a differentiation strategy the organization competes through the ability to offer unique or distinctive products and services that can command a premium price. Quebecor Printing can formulate strategies to offer low-cost printing solutions to its customers. The company can formulate a differentiation strategy by focusing on the "selective binding" feature as a key product feature that sets its product apart from that of its rivals.

61. Describe Miles and Snow's strategy typology.

ANSWER: The Miles and Snow typology is based on the idea that managers seek to formulate strategies that will be congruent with the external environment. Organizations strive for a fit among internal organization characteristics, strategy, and the external environment. The four strategies that can be developed are the prospector, the defender, the analyzer, and the reactor.

· Prospector: The prospector strategy is to innovate, take risks, seek out new opportunities, and grow. This strategy is suited to a dynamic, growing environment, where creativity is more important than efficiency.

· Defender: The defender strategy is almost the opposite of the prospector. Rather than taking risks and seeking out new opportunities, the defender strategy is concerned with stability or even retrenchment.

· Analyzer: The analyzer tries to maintain a stable business while innovating on the periphery. It seems to lie midway between the prospector and the defender.

· Reactor: The reactor strategy is not really a strategy at all. Rather, reactors respond to environmental threats and opportunities in an ad hoc fashion. With a reactor strategy, top management has not defined a long-range plan or given the organization an explicit mission or goal, so the organization takes whatever actions seem to meet immediate needs.

62. Describe the goal approach to measure effectiveness.

ANSWER: The goal approach to effectiveness consists of identifying an organization's output goals and assessing how well the organization has attained those goals. This is a logical approach because organizations do try to attain certain levels of output, profit, or client satisfaction. Indicators tracked with the goal approach include:

· Profitability—the positive gain from business operations or investments after expenses are subtracted.

· Market share—the proportion of the market the firm is able to capture relative to competitors.

· Growth—the ability of the organization to increase its sales, profits, or client base over time.

· Social responsibility—how well the organization serves the interests of society as well as itself.

· Product quality—the ability of the organization to achieve high quality in its products or services.

63. Explain the resource-based approach to measure effectiveness. List the various indicators that can be tracked with the resource-based approach.

ANSWER:	The resource-based approach looks at the input side of the transformation process. It assumes organizations must be successful in obtaining and managing valued resources in order to be effective because strategically valuable resources give an organization a competitive edge. From a resource-based perspective, organizational effectiveness is defined as the ability of the organization, in either absolute or relative terms, to obtain scarce and valued resources and successfully integrate and manage them. In a broad sense, resource indicators of effectiveness encompass the following dimensions: · Bargaining position—the ability of the organization to obtain from its environment scarce and valued resources, including tangible resources such as a prime location, financing, raw materials, and quality employees, and intangible assets such as a strong brand or superior knowledge. · The abilities of the organization's decision makers to perceive and correctly interpret the real properties of the external environment and supply forces. · The abilities of managers to use tangible (e.g., supplies, people) and intangible · (e.g., knowledge, corporate culture) resources and capabilities in day-to-day organizational activities to achieve superior performance. · The ability of the organization to respond to changes in resource sectors of the environment.

64. Write a brief note on the internal process approach.

ANSWER:	In the internal process approach, effectiveness is measured as internal organizational health and efficiency. An effective organization has a smooth, well-oiled internal process. Employees are happy and satisfied. Department activities mesh with one another to ensure high productivity. This approach does not consider the external environment. The important element in effectiveness is what the organization does with the resources it has, as reflected in internal health and efficiency. Internal process indicators include: · A strong, adaptive corporate culture and positive work climate · Confidence and trust between employees and management · Operational efficiency, such as using minimal resources to achieve outcomes · Undistorted horizontal and vertical communication · Growth and development of employees · Coordination among the organization's parts, with conflicts resolved in the interest of the larger organization

65. In the context of the competing values model, explain the four approaches to effectiveness values.

ANSWER:	The combination of dimensions provides four approaches to organizational effectiveness, which, though seemingly different, are closely related. In real organizations, these competing values can and often do exist together. Each approach reflects a different management emphasis with respect to structure and focus. A combination of external focus and flexible structure leads to an open systems emphasis.

Management's primary goals are growth and resource acquisition. The organization accomplishes these goals through the subgoals of flexibility, readiness, and a positive external evaluation.

The rational goal emphasis represents management values of structural control and external focus. The primary goals are productivity, efficiency, and profit. The organization wants to achieve output goals in a controlled way. Subgoals that facilitate these outcomes are internal planning and goal setting, which are rational management tools.

The internal process emphasis reflects the values of internal focus and structural control. The primary outcome is a stable organizational setting that maintains itself in an orderly way. Organizations that are well established in the environment and simply want to maintain their current position would reflect this emphasis. Subgoals include mechanisms for efficient communication, information management, and decision making.

The human relations emphasis incorporates the values of an internal focus and a flexible structure. Here, management concern is for the development of human resources. Employees are given opportunities for autonomy and development. Management works toward the subgoals of cohesion, morale, and training opportunities. Organizations adopting this emphasis are more concerned with employees than with the environment.
