ESSAY

52. Briefly discuss the issues an organization would want to understand if it were interested in a business venture in China.

Graders Info :

Answers will vary. Chinese managers' business practices have been shaped by the Communist party, socialism, feudalistic values, and *guanxi*, the practice of building networks for social exchange. Once *guanxi* is established, individuals can ask favors of each other with the expectation that the favor will be returned. Thus, many Chinese use *guanxi*, or personal connections, to conduct business or obtain jobs. Americans can learn to build their own *guanxi* in order to interact effectively with Chinese managers. This would involve understanding the Chinese chain of command and negotiating slow, general agreements. Please see the section "Competing in the Global Economy" for more information.

53. Mention the benefits and problems of diversity.

Graders Info :

Answers will vary. The benefits of diversity are:

1. It attracts and retains the best talent.
2. It improves marketing efforts.
3. It promotes creativity and innovation.
4. It results in better problem solving.
5. It enhances organizational flexibility.

The problems of diversity are:

1. It is resistant to change.
2. It lacks cohesiveness.
3. It consists of communication problems.
4. It results in interpersonal conflicts.
5. It slows the decision making process. Please see the section "The Diverse Workforce" for more information.

54. Provide a brief explanation for the character theories of ethics.

Graders Info :

Answers will vary. Virtue ethics, of which character theories of ethics are a type, offer an alternative to understanding behavior in terms of self-interest or rules. Character theories of ethics emphasize the character of the individual and the intent of the actor instead of the character of the act itself or its consequences. These virtue-ethics theories are based on an Aristotle's view of ethics, which focused on an individual's inner character and virtuousness rather than on outward behavior. Thus, the good person who acted out of virtuous and right intentions was one with integrity and ultimately good ethical standards. Robert Solomon is the best known advocate of this Aristotelian approach to business ethics. He advocates a business ethics theory centered on the individual within the corporation, emphasizing personal virtues as well as corporate roles. Solomon's six dimensions of virtue ethics are community, excellence, role identity, integrity, judgment, and holism. Please see the section "Ethics, Character, and Personal Integrity" for more information.

55. Explain distributive justice and procedural justice and distinguish between them.

Graders Info :

Answers will vary. Distributive justice concerns the fairness of outcomes individuals receive. For example, during former President George H.W. Bush's 1992 visit, Japanese CEOs questioned the distributive justice of keeping American CEOs' salaries so high while many companies were struggling and laying off workers.

Procedural justice concerns the fairness of the process by which outcomes are allocated. The ethical questions in procedural justice examine the process by which an organization distributes its resources.

One study of work scheduling found that advance notice and consistency, two dimensions of procedural justice, reduced voluntary turnover. Some research suggests cultural differences in the effects of distributive and procedural justice. Please see the section "Ethical Dilemmas Facing the Modern Organization" for more information.
